

# DM2282 2-phase Digital Stepper Drive

## 80-220VAC, 0.5-8.2A peak, Auto-configuration, Low Noise

- Anti-Resonance provides optimal torque and nulls mid-range instability
- Motor auto-identification and parameter auto-configuration technology, offers optimal responses with different motors
- Multi-Stepping allows a low resolution step input to produce a higher microstep output, thus offers smoother motor movement
- Microstep resolutions programmable, from full-step to 102,400. It can also be set via DIP switches.
- Soft-start with no “jump” when powered on
- Supply voltage up to +220 VAC
- Output current programmable, from 0.5A to 8.2A. It can also be set via DIP switches.
- Pulse input frequency up to 200 KHz
- TTL compatible and optically isolated input
- Automatic idle-current reduction (Reduction rate can be software configured)
- Suitable for 2-phase and 4-phase motors
- Support PUL/DIR and CW/CCW modes
- Over-voltage, Under-voltage, over-current, phase-error protections

### Descriptions

The DM2282 is a high voltage, fully digital stepper drive developed with advanced DSP control algorithm based on the latest motion control technology. It has achieved a unique level of system smoothness, providing optimal torque and nulls mid-range instability. Its motor auto-identification and parameter auto-configuration feature offers quick setup to optimal modes with different motors. Compared with traditional analog drives, DM2282 can drive a stepper motor at much lower noise, lower heating, and smoother movement. Its unique features make DM2282 an ideal choice for high requirement applications.

### Applications

Suitable for a wide range of stepper motors, from NEMA size 34 to 51. It can be used in various applications such as laser cutters, laser markers, high precision X-Y tables, labeling machines, CNC router, etc. Its unique features make the DM2282 an ideal choice for applications that require both low-speed smoothness and high speed performances

## Specifications

### Electrical Specifications

Parameter	Min	Typical	Max	Unit
Input Voltage	80	220	220	VAC
Pulse Input Frequency	0	-	200	kHz
Logic Signal Current	7	10	16	mA
Isolation Resistance	500	-	-	MΩ

### Operating Environment

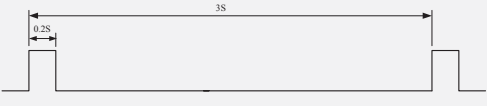

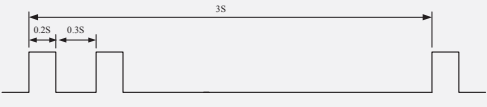

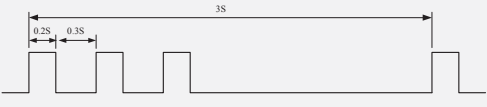

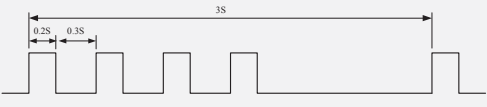

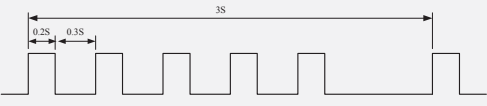

<b>Cooling</b>	Natural Cooling or Forced cooling	
<b>Operating Environment</b>	Environment	Avoid dust, oil fog and corrosive gases
	Storage Temperature	-20°C – 65°C (-4°F – 149°F)
	Ambient Temperature	0°C – 50°C (32°F – 122°F)
	Humidity	40%RH – 90%RH
	Operating Temperature (Heat Sink)	70°C (158°F) Max
<b>Storage Temperature</b>	-20°C – 65°C (-4°F – 149°F)	
<b>Weight</b>	1.3Kg (2.87lbs)	

### Mechanical Specifications

## Protection Indications

The green indicator turns on when power-up. When drive protection is activated, the red LED blinks periodically to indicate the error type.

Priority	Time(s) of Blink	Sequence wave of RED LED	Description
1st	1		Over-current Protection
2nd	2		Over-voltage Protection
3rd	3		Low-voltage Protection
4th	4		Phase Error Protection
5th	5		Over Temperature Protection

## Pin Assignment

The DM2282 has one barrier strip connector for power and motor connections and one screw terminal for control signal connections.

Power and Motor Connector			
Pin	Name	I/O	Description
1	PE	-	Recommend connect this port to the ground for better safety.
2	L	I	Power supply inputs. If AC input, recommend use isolation transformers with theoretical output voltage of 80~220VAC. DC input range is 115~305VDC
3	N	I	
4	A+	O	Motor Phase A+
5	A-	O	Motor Phase A-
6	B+	O	Motor Phase B+
7	B-	O	Motor Phase B-

## Pin Assignment

Control Signal Connector			
Pin	Name	I/O	Description
1	PUL+	I	<p><u>Pulse Signal</u>: In single pulse (pulse/direction) mode, this input represents pulse signal, each rising or falling edge active (software configurable, see DM drives software operational manual for the detail); In double pulse mode (software configurable), this input represents clockwise (CW) pulse, active both at high level and low level. 4-5V when PUL-HIGH, 0-0.5V when PUL-LOW. For reliable response, pulse width should be longer than 2.5<math>\mu</math>s. Series connect resistors for current-limiting when +12V or +24V used. The same as DIR and ENA signal.</p>
2	PUL-	I	
3	DIR+	I	<p><u>Direction Signal</u>: In single-pulse mode, this signal has low/high voltage levels, representing two directions of motor rotation. In double-pulse mode (software configurable), this signal is counter-clock (CCW) pulse, active both at high level and low level. For reliable motion response, DIR signal should be ahead of PUL signal by 5<math>\mu</math>s at least. 4-5V when DIR-HIGH, 0-0.5V when DIR-LOW. Please note that rotation direction is also related to motor-driver wiring match. Exchanging the connection of two wires for a coil to the driver will reverse motion direction. The direction signal's polarity is software configurable.</p>
4	DIR-	I	
5	ENA+	I	<p><u>Enable signal</u>: This signal is used for enabling/disabling the drive. In default, high level (NPN control signal) for enabling the driver and low level for disabling the driver. Usually left <b>UNCONNECTED (ENABLED)</b>. Please note that PNP and Differential control signals are on the contrary, namely Low level for enabling. The active level of ENA signal is software configurable.</p>
6	ENA-	I	
7	FAULT+	O	<p><u>Fault Signal</u>: OC output signal, active when one of the following protection is activated: over-voltage, over current, low voltage, phase error and over-temperature. This port can sink or source 20mA current at 24V. In default, the resistance between FAULT+ and FAULT- is high impedance in normal operation and become low when DM2282 goes into error.</p>
8	FAULT-	O	

## RS232 Communication Port

The RS232 communication port is used to configure the DM2282's peak current, microstep, active level, current loop parameters and anti-resonance parameters. See DM driver's software operational manual for more information.

RS232 Communication Port			
Pin	Name	I/O	Description
1	NC	-	Not connected.
2	+5V	O	+5V power only for STU (Simple Tuning Unit).
3	TxD	O	RS232 transmit.
4	GND	GND	Ground.
5	RxD	I	RS232 receive.
6	NC	-	Not connected.

## DIP Switch Settings

### Dynamic Current

Peak	RMS	SW1	SW2	SW3
<b>Default</b>	<b>Default</b>	OFF	OFF	OFF
<b>2.2A</b>	<b>1.6A</b>	ON	OFF	OFF
<b>3.2A</b>	<b>2.3A</b>	OFF	ON	OFF
<b>4.2A</b>	<b>3.2A</b>	ON	ON	OFF
<b>5.2A</b>	<b>3.7A</b>	OFF	OFF	ON
<b>6.3A</b>	<b>4.4A</b>	ON	OFF	ON
<b>7.2A</b>	<b>5.2A</b>	OFF	ON	ON
<b>8.2A</b>	<b>5.9A</b>	ON	ON	ON

**Note:** Due to motor inductance, the actual current in the coil may be smaller than the dynamic current setting, particularly under high speed condition.

### Idle-Current

SW4 determines whether current-reduction is performed when there is no pulse applied to DM2282..

	ON	OFF
<b>SW4</b>	Motor current reduces automatically when there is no pulse applied to DM2282.	Motor current is the same as the dynamic current when there is no pulse applied to DM2282.

### Microstep Resolution

Steps/Revolution	SW5	SW6	SW7	SW8
<b>Software Configured (Default 200)</b>	ON	ON	ON	ON
<b>400</b>	OFF	ON	ON	ON
<b>800</b>	ON	OFF	ON	ON
<b>1600</b>	OFF	OFF	ON	ON
<b>3200</b>	ON	ON	OFF	ON
<b>6400</b>	OFF	ON	OFF	ON
<b>12800</b>	ON	OFF	OFF	ON
<b>25600</b>	OFF	OFF	OFF	ON
<b>1000</b>	ON	ON	ON	OFF
<b>2000</b>	OFF	ON	ON	OFF
<b>4000</b>	ON	OFF	ON	OFF
<b>5000</b>	OFF	OFF	ON	OFF
<b>8000</b>	ON	ON	OFF	OFF
<b>10000</b>	OFF	ON	OFF	OFF
<b>20000</b>	ON	OFF	OFF	OFF
<b>25000</b>	OFF	OFF	OFF	OFF

### Auto-Configuration

Switch SW4 two times in two seconds will activate parameter Auto-configuration for DM2282's current loop. That is, OFF-ON-OFF or ON-OFF-ON. During Auto-configuration, motor parameters are identified and DM2282's current loop parameters are calculated automatically. The motor shaft will vibrate a little during the process of Auto-configuration which takes about 1 to 3 seconds.

### Typical Connections

#### NPN Control Signal
